

# The secure & cost- effective Project Management Suite

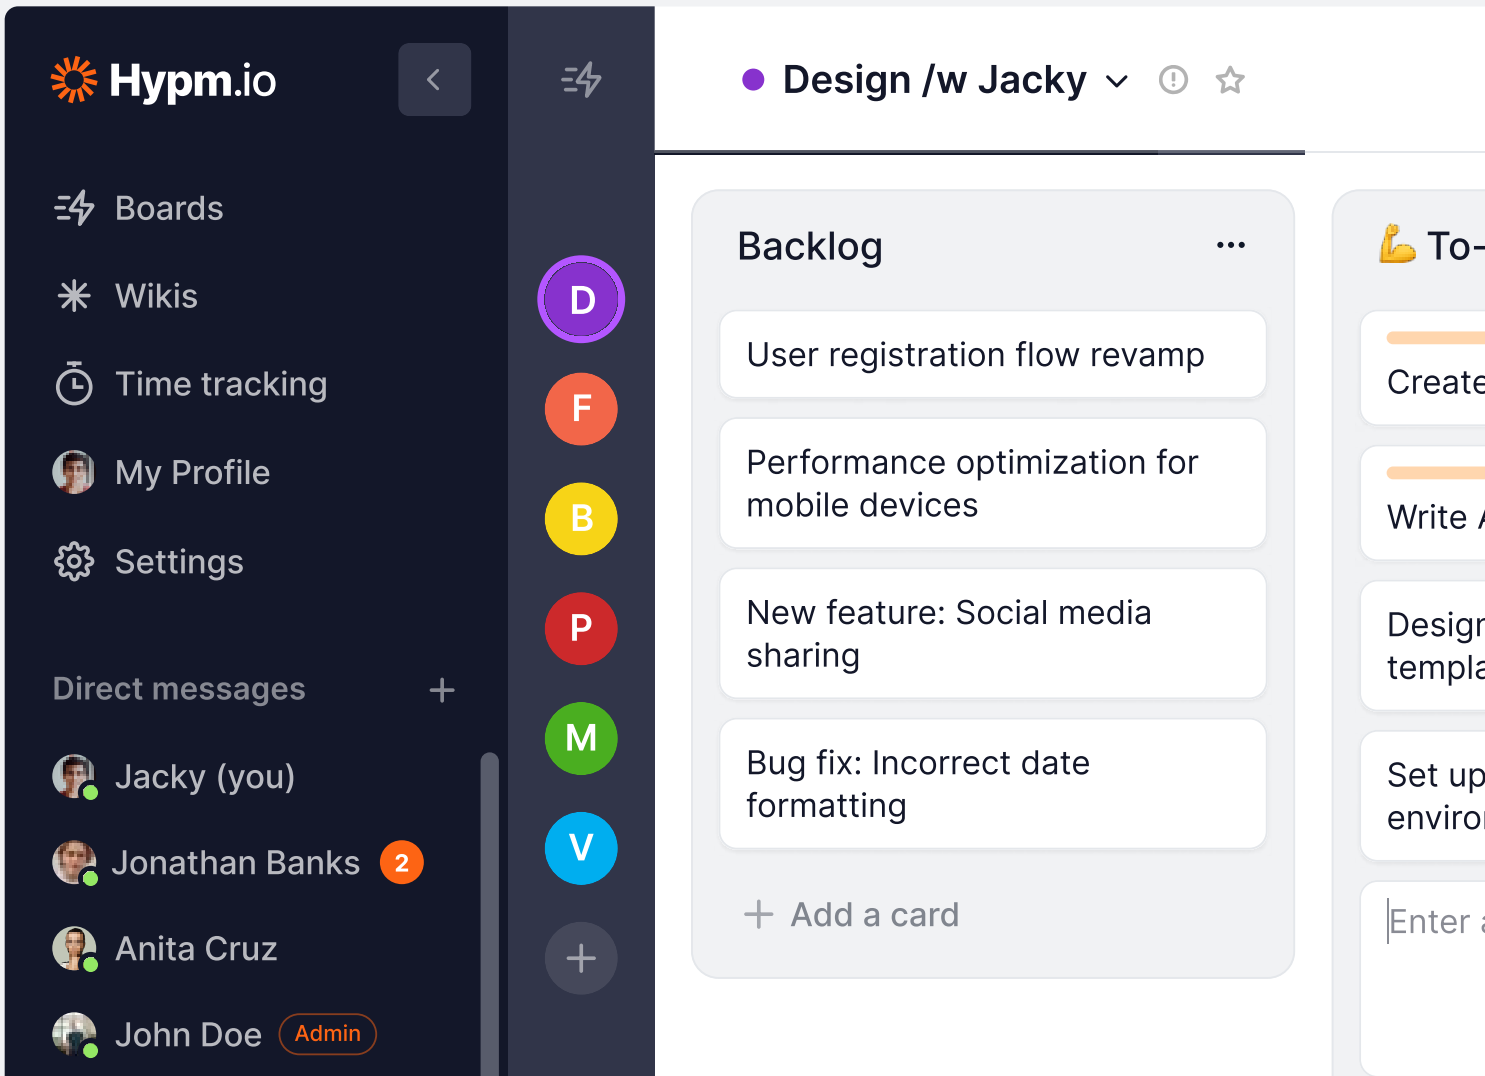

#kanban

#timetracking

#wikis

#chat

#gantt

The screenshot displays the Hypm.io interface. On the left is a dark sidebar with the Hypm.io logo and navigation options: Boards, Wikis, Time tracking, My Profile, Settings, Direct messages, and a list of users (Jacky (you), Jonathan Banks, Anita Cruz, John Doe (Admin)). A vertical stack of colored circles (D, F, B, P, M, V) is positioned between the sidebar and the main content. The main content area shows a project board for 'Design /w Jacky'. The board has a 'Backlog' section with four task cards: 'User registration flow revamp', 'Performance optimization for mobile devices', 'New feature: Social media sharing', and 'Bug fix: Incorrect date formatting'. To the right, a 'To-do' list is partially visible with items like 'Create', 'Write A', 'Design template', and 'Set up enviro'.

# Data control and privacy have become essential

Businesses, especially those handling sensitive or proprietary information, need assurance that their data is not only secure but also within their control. Freelancers and smaller enterprises, often handling projects for larger companies, also need to ensure they're compliant with strict data handling policies.

Current project management solutions in the market either compromise on these aspects or charge exorbitant fees for enhanced privacy features.

# A new paradigm in project management

## Team and Work — managed under the same roof

- ✓ Collaboration with the team via chat
- ✓ Documentation of the project, tools, company resources via a modern Wiki (including markdown editor)
- ✓ Planning of the tasks using Kanban and Gantt charts (Scrum methodology)
- ✓ Time tracking for easy project cost estimates (time and material)
- ✓ Integrated project financing: from estimate to final customer invoice

## Better data management

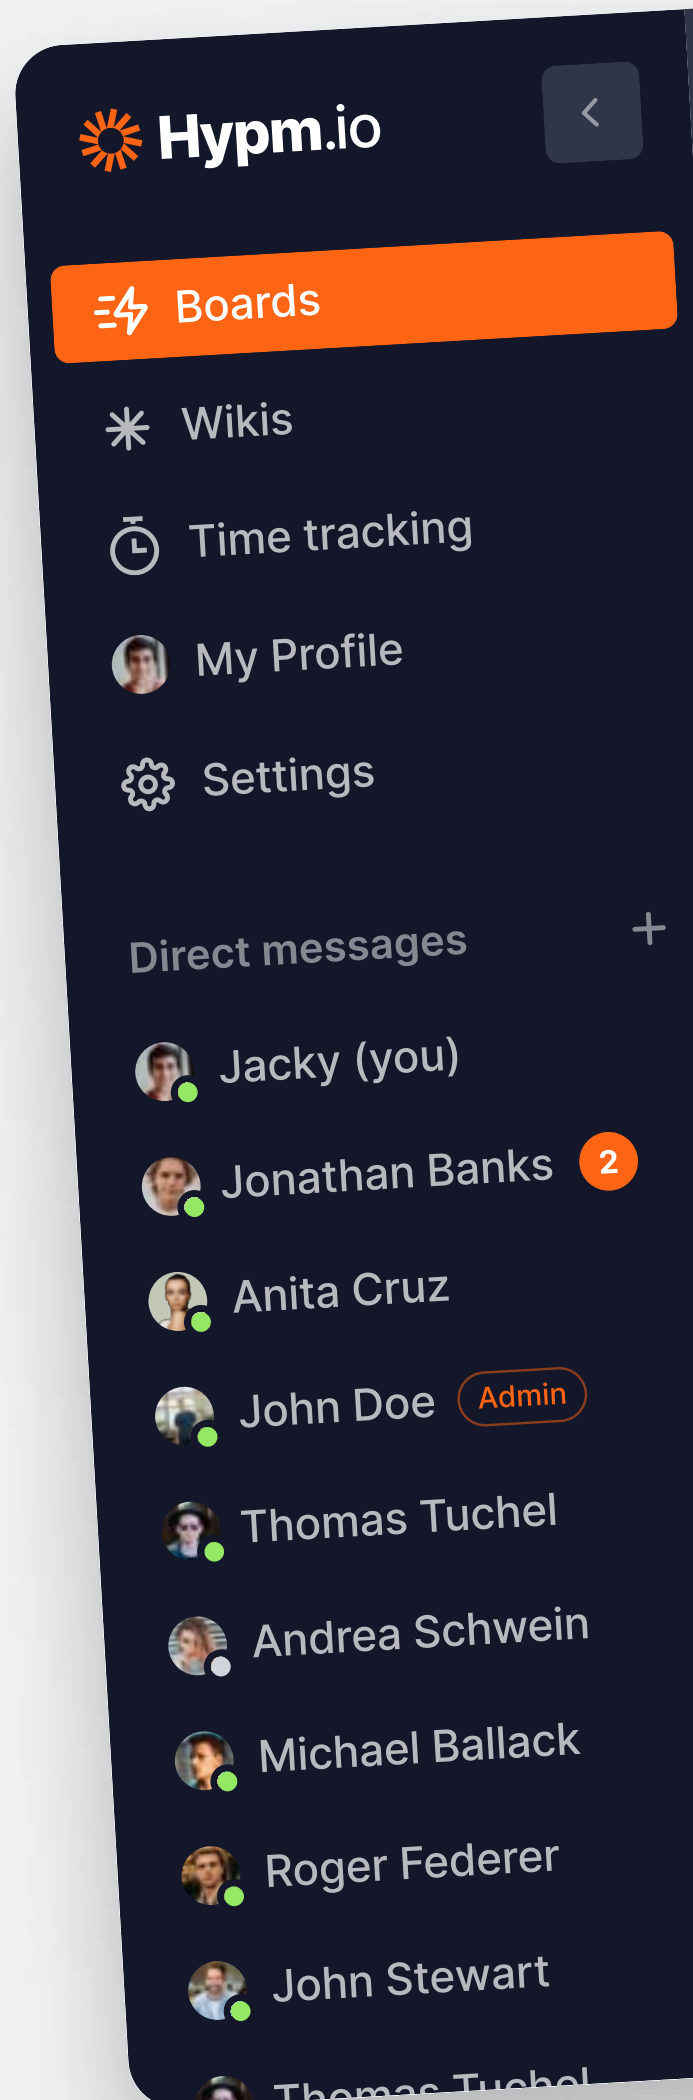

- ✓ One location to store all project related information
- ✓ Possibility to run the software locally for project with strong privacy requirements

# It all starts with a clear interface

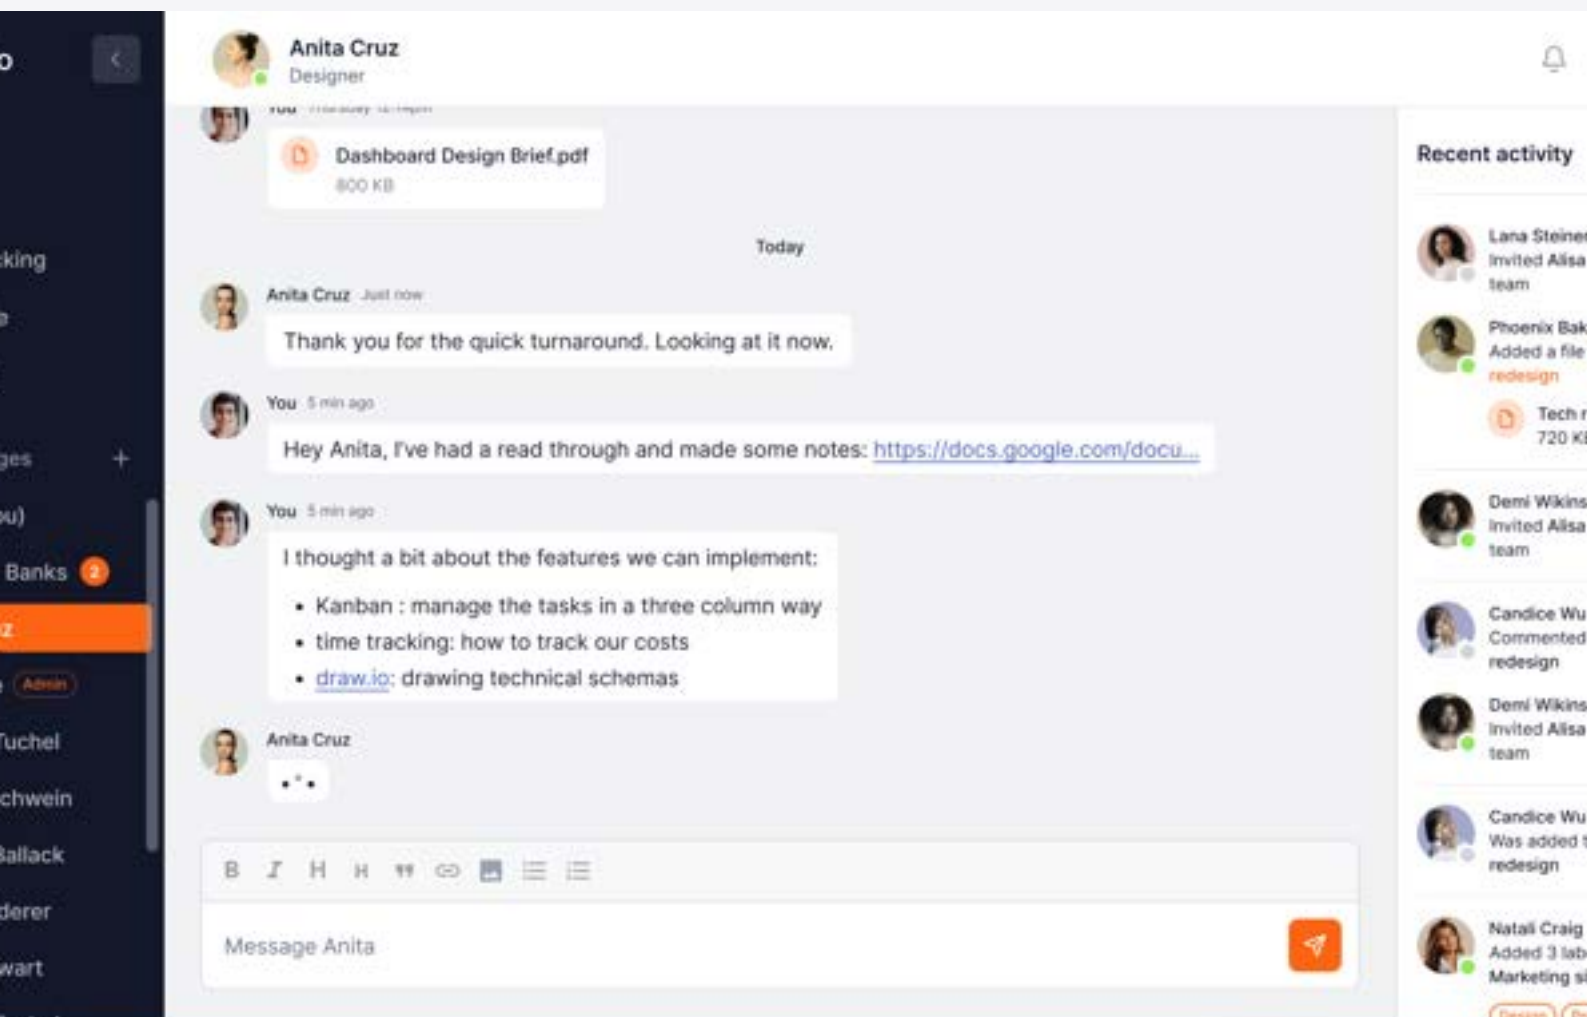

- \* Instant messaging
- \* Time tracking
- \* Wikis + Docs
- \* Kanban + Gantt
- \* *and more*

Our platform offers an integrated time-tracking features that not only allows you to keep track on how much time is being spent on specific tasks but also enables you to make accurate cost estimates (based on the time and materials methodology). This level of granular detail serves as the foundation for transparent, accurate invoicing, removing any guesswork or discrepancies that can often arise in projects.

# Chat

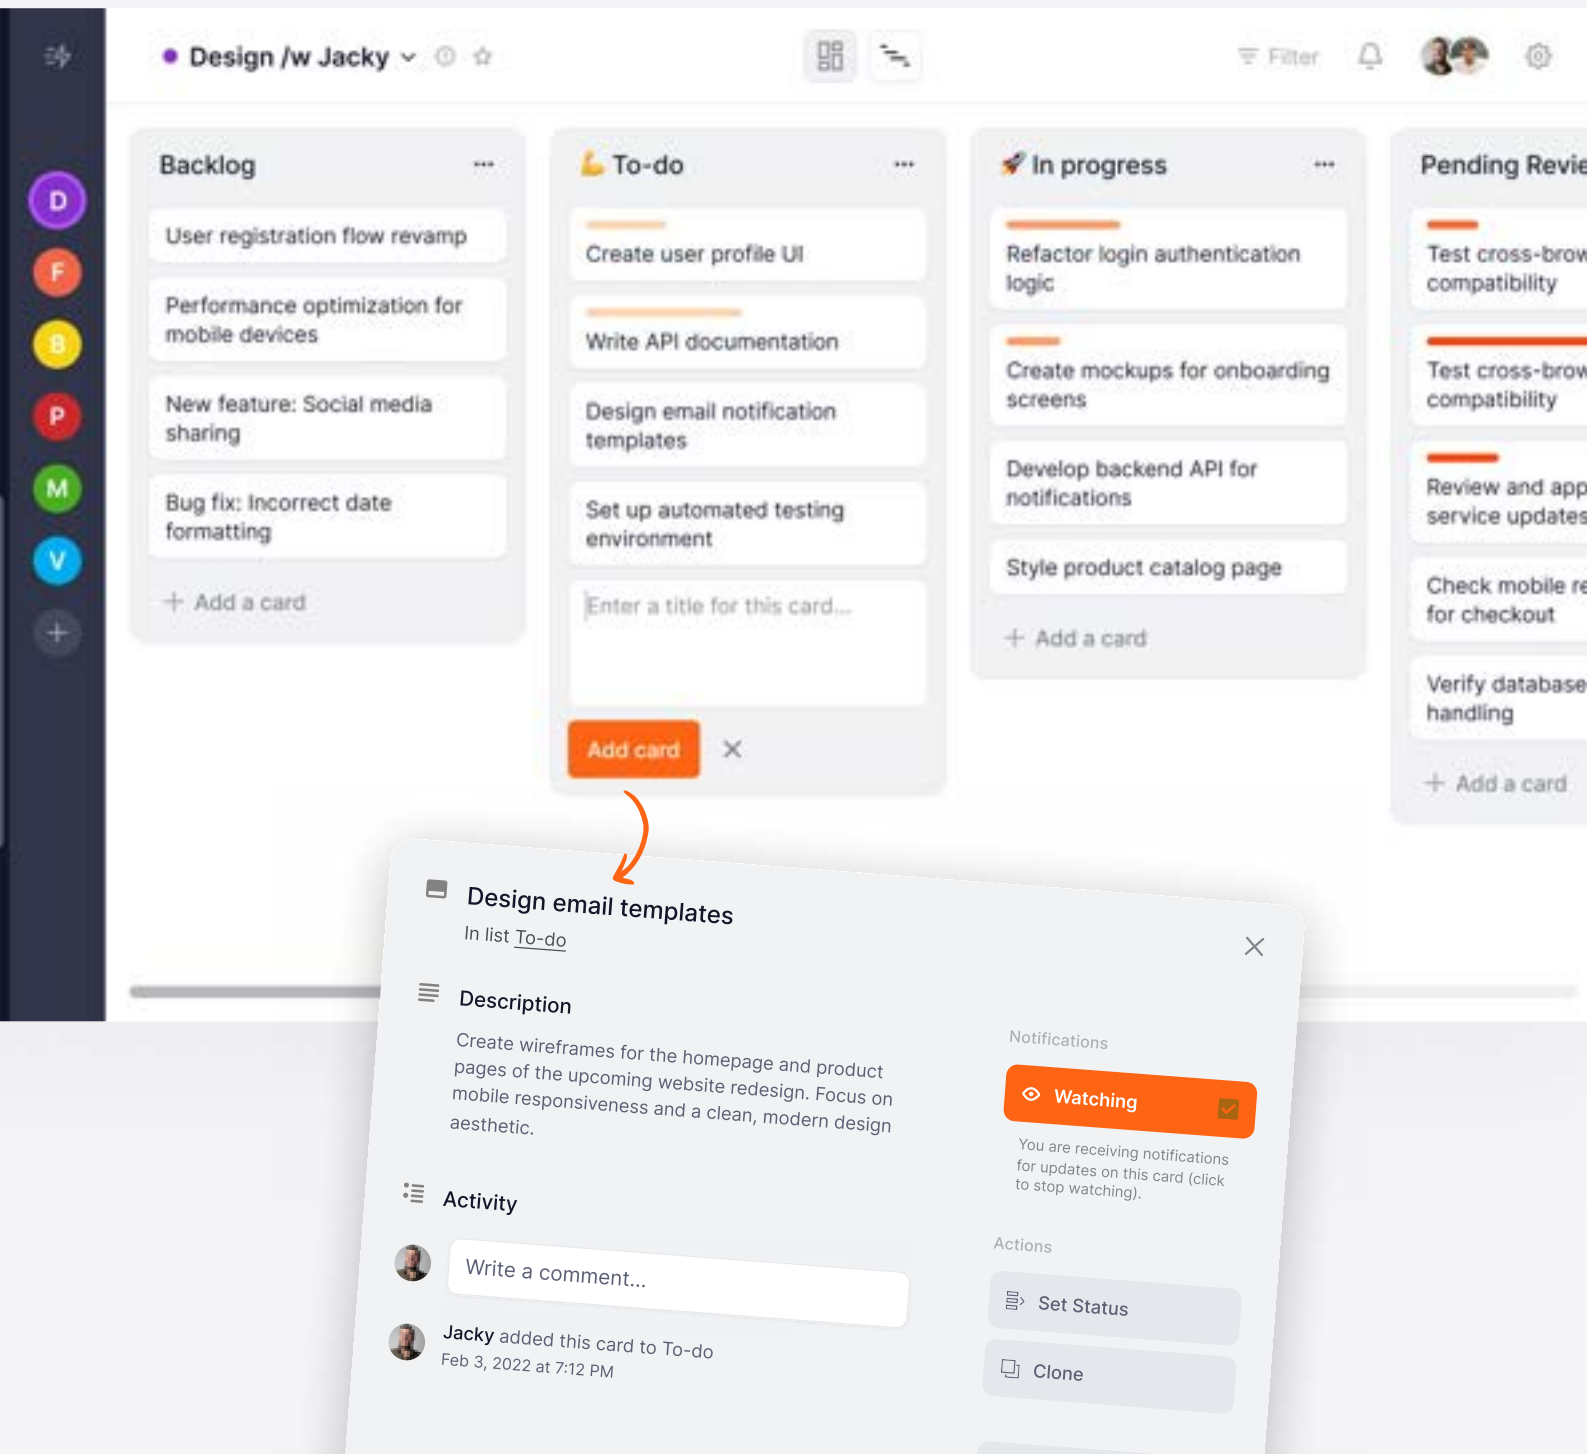

Hypm's chat feature offers capabilities that go beyond what other communication platforms offer. Unlike traditional chat systems that serve primarily as messaging platforms, Hypm's chat is deeply integrated into the project management workflow. This enables real-time communication to coalesce seamlessly with task assignments, time-tracking, and documentation, thus eliminating the need to juggle multiple platforms.

*Get text-formatting, file uploads, user activity, and more..*

# Kanban

Hypm's Kanban boards are optimized for Agile methodologies (in particular Scrum framework) but also flexible enough to accommodate other frameworks, making them remarkably versatile.

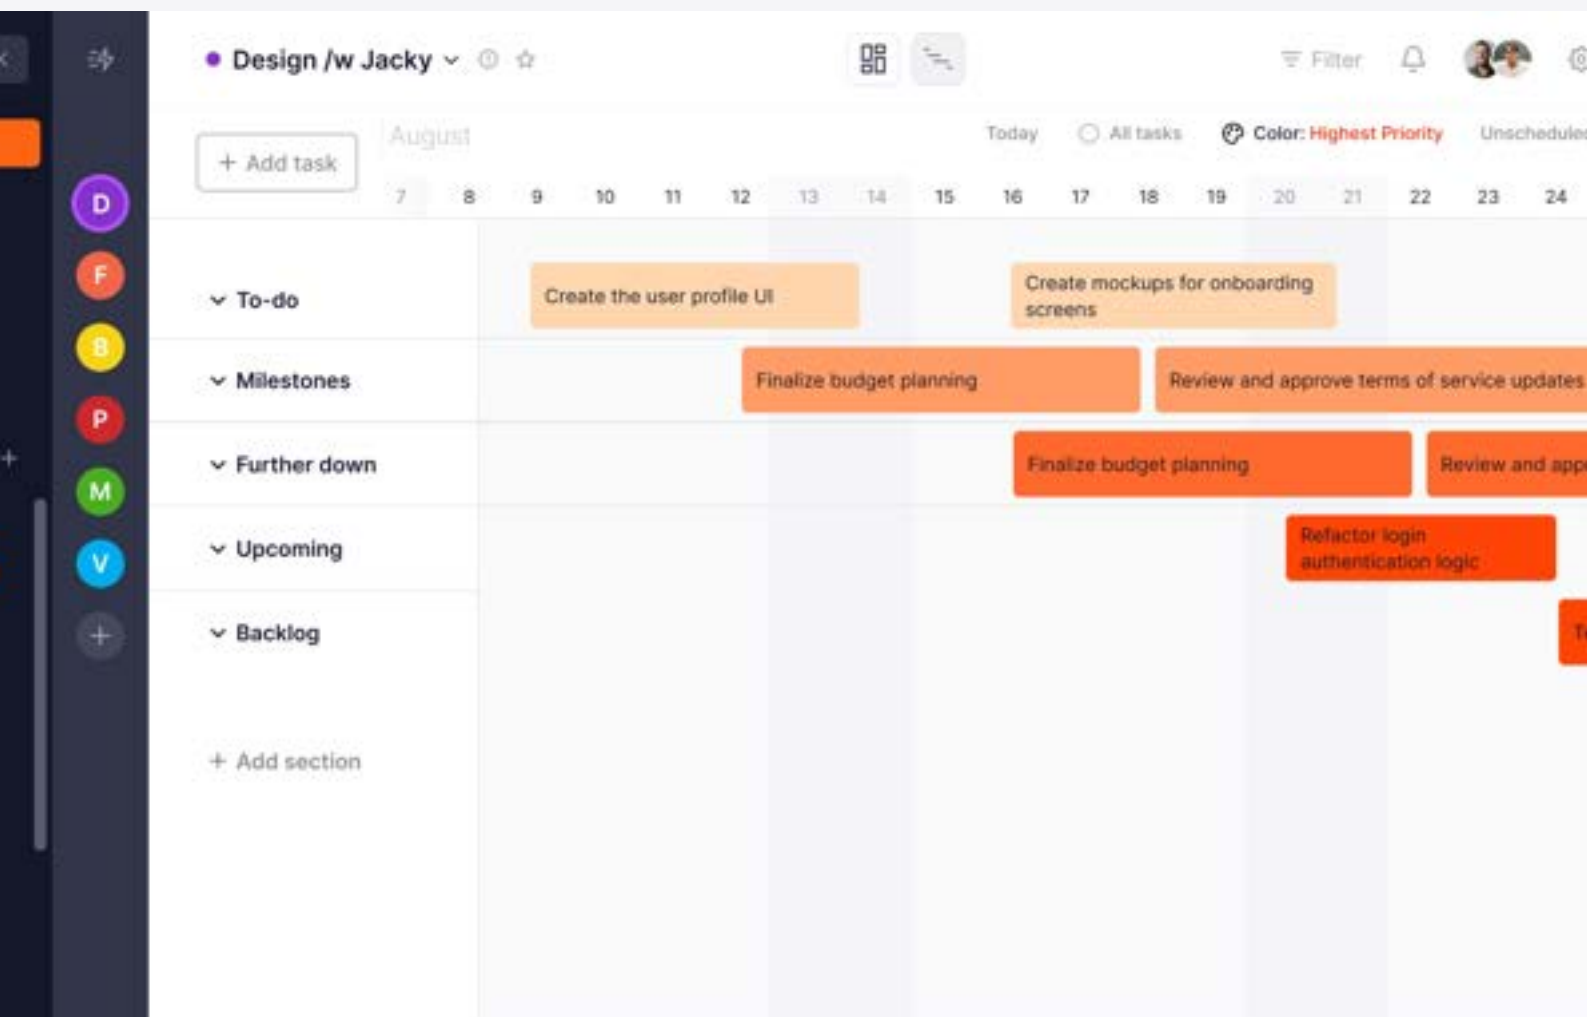

# Gantt

Gantt charts offer an excellent way to plot out the timeline of a project, show relationships between tasks, and allocate resources efficiently. Compared to Kanban, Gantt charts help managing the long-term strategic planning.

Incorporating both tools within the same platform eliminates the need for disjointed third-party solutions.

*Switch between Gantt and Kanban*

*Easily create and view boards*

# Privacy and Security at a fraction of the cost

## **One secure location for all your information**

With HYPM , all your project-related data is stored in one secure location, creating a unified data environment that is easier to monitor and protect.

## **Local execution possible**

For projects with high-security requirements, our platform can be run locally, ensuring that sensitive data never leaves your internal network.

## **Encryption and data protection**

All your data is encrypted both in transit and at rest, providing an additional layer of security to your project information.

## **Granular permission and access control**

Set granular permissions for team members, ensuring that only authorized individuals have access to specific pieces of information.

March 2024

**Official Launch** 🎉

# Open Source Software

Hypm will be an open-source software, fostering innovation, community engagement, and transparency. We want to create an ecosystem where anyone can add features or improve existing ones, making the platform more robust and versatile over time.

Companies, freelancers, and small businesses are increasingly concerned about data privacy and control, issues directly addressed by the open-source nature of Hypm. With the source code being publicly available, users can independently audit the software for security and compliance, adding an additional layer of trust.

In a time where expensive, "black box" solutions dominate the landscape, Hypm's transparent and community-driven approach is a significant differentiator that attracts a dedicated user base willing to contribute to the platform's success both in terms of features and financial sustainability.

# Freemium business model

## Basic Free Tier

Offer a free version of the Hypm platform with limited features and data storage capacity. This tier will include basic task management, limited Kanban boards, and essential time-tracking functionalities.

## Premium Subscriptions

Provide multiple subscription tiers with increasingly advanced features, such as advanced Gantt chart capabilities, unlimited storage, detailed analytics, and top-tier data security features like local execution. This will be further segmented to suit the specific needs of freelancers, small businesses, and large organizations.
